Nowadays, emphasis is often placed on assessment for learning, as opposed to assessment of learning. But what exactly is the difference? In brief, assessment for learning involves the teacher and student becoming (24) \_\_\_\_\_ of how learning can be improved, and techniques mastered. Assessment of learning, on the other hand, simply tests what a student knows. Assessment for learning consists of students recognising where they are and where they want to go to in order to reach their goals. (25) \_\_\_\_\_, they need to participate actively in their learning.

In order for students to be motivated to learn, there should always be a clear lesson objective and all targets should focus on the needs and abilities of (26) \_\_\_\_\_ individual class. The teacher's role is to explain to students why they are learning what they are learning, and as most students' attention (27) \_\_\_\_\_ is short, teachers should opt for a variety of interactive activities during the lesson. The use of audiovisual aids generally helps students pick up things more easily, (28) \_\_\_\_\_ in turn makes the learning process more effective overall.

Japanese Girls' Day-also known as the Doll's Festival-is celebrated on March 3 to pray for the health and happiness of young girls in Japan. Hinamatsuri, the name of the celebration in Japan, is marked by families displaying a set of Hina dolls in the house and serving special **delicacies** that are ceremonially beautiful and delicious.

Traditionally, parents or grandparents of a newborn girl buy a set of Hina dolls for the baby, unless they have special dolls that are inherited from generation to generation. From the end of February to March 3, Hina dolls dressed in Japanese ancient costumes are displayed on tiered platforms that are covered with a red carpet. The costumed dolls represent the imperial court of the Heian period (A.D. 794 to 1185] and feature the emperor, empress, attendants, and musicians dressed in traditional garb.

The dolls are displayed hierarchically with the emperor and empress at the top, which are set in front of a gilded screen representing the throne. The number of dolls and their size vary from home to home, but five to seven platforms are common.

It is customary to put the dolls away as soon as the festival is over-there is a superstition that if the dolls are left out, a family will have trouble marrying off their daughters. After the festival, some people release paper dolls into the rivers praying that **this** will send away sickness and bad fortune.

Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the correct answer to each of the questions.

We are a planet of seven billion people, and this number is growing by about 370,000 people every day. This is putting a huge **strain** on the planet's natural resources. For many governments and environmental organizations, the race is on to drastically reduce our consumption of resources before they run out.

Water is one of our most precious resources. Our quality of life, as well as life itself, depends on the availability of clean, fresh water. It is the most widely used resource in industry and plays a major role in energy production. Although 70 percent of the world is covered in water, only 2.5 percent of that is fresh water, and less than one percent of that freshwater is readily available to us. Yet we often **overestimate** how much water we have and reduce it further through pollution or inefficient use.

Some 92 percent of all fresh water used annually is dedicated to growing plants and raising animals for food. This means that if water runs out, our food supply might follow. In India, it is estimated that future water shortages could reduce grain harvests by 25%. In a country where the population exceeds 1.2 billion people and is growing rapidly every year, this is a huge concern. India, like many developing countries, is already struggling to provide for its population. While most people in developed countries can get water at the turn of a tap, nearly four billion people elsewhere lack access to safe water, according to United Nations Development Report.

Rain forests are another endangered resource. While rain forests are critically important to humanity, **they** are rapidly being destroyed by human activities. The biggest cause of deforestation is conversion of forest land for agriculture. Often called the "Lungs of the Planet", rain forests once covered 14 percent of the Earth's land surface, but this has shrunk to only six percent. Every second, an area of rain forest, the size of a football field, is destroyed at this rate. Rain forests will possibly disappear completely in less than 40 years.

**Question 34:** Which best serves as the title for the passage?

- A. Resources for the future.
