Scientists have dreamed for a long time about building a 'flying train' which can float through the air above the tracks. With Maglev technology, their dreams are now a reality. Maglev trains have no wheels. Instead, **powerful** magnets lift them into the air and push them forward, at speeds of up to 500 km per hour.

As well as speed, Maglev has a number of advantages over other transport systems. The trains are quieter and the journey is smoother because **they** don't have wheels. They are also greener because they don't use fuel and so create less pollution. Right now there is only one high-speed Maglev train system in the world. It carries passengers from Shanghai city centre to the airport. However, work has started on a new, longer Maglev track in Japan. Trains will go from Tokyo to Nagoya in 40 minutes. But don't expect to ride on it on your next trip to Japan. It won't open until 2027! Then, in 2045, the line will extend to Osaka.

There is one major problem with Maglev technology: it is incredibly expensive to build the tracks. Transport planners predict that the Tokyo to Osaka line will cost 91 billion dollars. The high cost means that Maglev technology probably won't replace other forms of transport in the near future. However, the technology is still in development and somebody might find a cheaper and simpler way to build the tracks. And then, who knows? In the future, some of us might fly to work by train.

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 44- 45

The Most Powerful Force in Space

A black hole is a spot in space that has incredibly powerful gravity. A hole's gravity is so strong that it pulls everything nearby into it. It can pull stars, planets, and other things. Nothing can escape a black hole. In fact, they are so powerful that even light cannot escape **them**.

Scientists first started talking about black holes in the year 1783. That year, one scientist said that in the universe, there might be places with gravity strong enough to trap light. However, that scientist didn't use the term "black hole". The term "black hole" was invented in 1967.

Black holes are formed when a star dies. When a star dies, it **collapses**. When that happens, a huge amount of matter crowds into a very small space. The matter becomes very, very dense. How much matter are we talking about? Imagine a star that is the size of ten suns. Imagine fitting that amount of matter into New York City. That is what a black hole is like. Its gravity is so powerful because it has so much matter.

However, not all black holes are huge. Scientists believe that some black holes are the size of atoms. Although these black holes are tiny, they might have the same amount of matter that a mountain has.

We can't see black holes because they don't have any light. They are completely invisible. Scientists can guess where black holes are by studying nearby stars and planets. If gravity seems to be pulling the stars and planets to one spot, then scientists believe that the spot is a black hole.

Some people wonder if a black hole could ever destroy the Earth. We do not need to worry about that. There is no black hole that is close enough to destroy the Earth. The closest black hole is about 7,800 light years away. In addition, the sun is not big enough to create a black hole.

Câu 44. When are black holes formed?

- A. When a planet collapses B. When two suns crash into each other
 C. When a star dies D. When a new star is formed

Câu 45. How do scientists study black holes?

- A. They visit the black holes. B. They look at the sun.
 C. They look at nearby stars. D. They look at the black holes.

Câu 46. Which statement is **NOT** true?

- A. Black holes have very little matter. B. We can't see black holes.
 C. Black holes can be big or small. D. Nothing can escape a black hole.

Câu 47. Which of the following **CAN'T** be inferred from the passage?

- A. The movement of stars and planets are affected by a nearby black hole.
 B. Scientists started studying a black hole in 1967.
 C. A black hole gets its name because it does not have any light.
 D. A black hole is invisible because it traps light.

Câu 48. The word "**them**" in paragraph 1 refers to _____.

- A. empty spaces B. gravitation C. black holes D. planets

Câu 49. The word "**collapses**" in paragraph 3 is closest in meaning to _____.

- A. falls inwards B. breaks down
 C. becomes unconscious D. fails

Câu 50. What would be another good title for the passage?

- A. Places without Gravity
 B. Strong Enough to Pull a Planet
 C. The Brightest Things in the Universe
 D. Will a Black Hole Destroy the Earth?
